THE INLAND SEED CO.

120-122 SOUTH HOWARD STREET

Spokane, Washington

* * 1 9 3 9 * *

We take this opportunity of thanking our friends for their patronage during the past and ask for a continuation of same.

THE INLAND SEED COMPANY

was organized in 1911 and has continued in business all these years under the same management and has persistently followed the principle of furnishing the best seeds obtainable, believing that quality is of much more importance than price, and would suggest to the purchaser of seeds that their first consideration be given to quality.

THE DIFFICULTY

is that the purchaser of seeds cannot always judge quality by appearance, therefore, to a great extent, must rely upon the reputation of the seed company with which he is dealing.

THE INLAND SEED COMPANY

at all times prefers to purchase home grown seeds when quality measures up to its high standard that it persistently aims at and has always carefully investigated strains and varieties best suited to the Northwest.

We are at all times glad to discuss with farmers, gardeners and housewives any of their problems in which they are interested. Our time and knowledge of such matters are at your disposal and if we cannot serve you in a manner that will increase your joy and pleasure in living, we do not want you to purchase, but will gladly direct you, if we can, where you can be better served. We are here to serve, and the more efficiently we can do this, the better we are pleased and the better our customers are pleased.

BETTER GARDENING

The past three years we have been advertising the above book edited by Harry O'Brien. This book consisted of 48 pages and sold for 10 cents. This book has been entirely rewritten and now contains 120 pages, and we are advised is lavishly illustrated with photographs from the most complete library of horticultural pictures in America. Mr. O'Brien has been gathering a fund of new information in his travels amongst growers, horticulturists and the leaders in the gardening fraternities. The following are some of the new features: Up-to-the-minute lists of plant varieties, latest science of soil chemistry, how to propagate, when to divide, the make and use of hotbeds and cold frames. Price 25c.

FREE INFORMATION BUREAU

We are glad to record that our customers have used this freely, and we wish to state that it has been a source of great pleasure and profit to ourselves, as frequently we have been obliged to investigate before answering, and this fact accounts for the delay of a few days in answering some inquiries. This has been established for the use of our customers and the more it is used the better we are pleased. It is entirely free.

PLANTS AND ROOTS

ONION PLANTS

Matured onions can be secured from plants much sooner than from seed. It is recommended to plant the rows 16 inches apart and the plants 3 to 4 inches apart in the rows. If planted in this manner it will take about 100,000 to the acre. Do not plant too deep. Plants are put up in bundles of about 100, and 60 bundles to a crate. Count not guaranteed. We are growing quite an acreage in the Northwest and quotations made are on these plants. In case of excessive winter killing, when we might be compelled to secure some plants in Texas, price would be higher.

Prices, Postpaid

3 bundles	.60
6 bundles	1.00
10 bundles	1.50
Crate, 60 bundles, not prepaid	5.50

Crate weighs about 30 lbs. Not less than two bundles sold.

It is well known that plant men suffer a loss each year on account of the death of seedlings caused by rotting at the ground line. This is due to various species of fungi which may be present in the soil or on the seed. Semesan is highly recommended to control this disease and may be used for either seed or soil treatment. If used as a soil drench after planting the seed, apply at the rate of one teaspoonful to one quart of water, and if used for treating the seed, follow directions on the package.

PLANTS, VEGETABLES

Please note that the quotations made on non-transplanted plants are for outdoor grown plants, hence price does not apply to plants started and grown in hot beds or under glass. Outdoor grown plants are usually ready about May 15.

All plants need food—carefully selected, scientifically prepared. Food that insures green, velvety, weedless lawns, beautiful, luxuriant flowers, healthy, disease-resisting trees and shrubs, and earlier maturing, health-giving vegetables.

Half-starved lawns have a thin growth; often contain yellow spots; are frequently infested with dandelions and obnoxious weeds. Half-starved vegetables have poor color and quality and mature slowly. Half-starved flowers show under-developed blooms, deficient growth and lack of color. The best seeds and plants will not thrive in impoverished soils. But deficiencies can be remedied by feeding a plant food scientifically prepared.

PLAN-TONE is not an ordinary by-product fertilizer. It is not made from refuse. It is clean, odorless, free from weed seed and easy to apply. Notice its high analysis: Nitrogen 4%, phosphoric acid 20%, Potash 5%.
